Abstract

Introduction

The introduction of the World Wide Web (WWW), 25 years ago, has considerably altered the manner in which people obtain information. Soon after the introduction of the WWW, it was evident that traditional browsing was totally insufficient for internet users to locate the information that interests them. This need was covered with the development of search engines.

Today, search engines play one of the most important roles in disseminating content. Search engine optimization (SEO) is a collection of strategies that improves a website's presence and visibility on a search engine's results page (SERP). In other words, the higher and more frequently a site appears in search results, the more visitors it will receive through the use of search engines. The importance of SEO can be understood by the fact that many web sites today receive the majority of their web traffic through a search engine's organic results.

The methods that SEO includes can be divided into four major categories: keyword research/selection, search engine indexing, on-page optimization, and off-page optimization. On-page optimization includes the management of all factors associated directly with someone's website (e.g., keywords, appropriate content, and internal link structure), while off-page optimization includes all the efforts made away from the website such as link building or social signal strategy.

Undeniably, the world of search engine optimization has changed and evolved drastically over the years with a shift away from traditional ranking factors towards deeper analysis, and factors such as quality, multi-form content, and social signals. However, even though SEO has changed a lot, it remains an important part of any digital marketing strategy.

This special issue is soliciting theoretical and case studies contributions, discussing and treating challenges, state-of-the-art technology, and solutions on search engine optimization, including, but not limited to, the following themes related to SEO: Theory of SEO, different types of SEO, SEO criteria evaluation, search engines' algorithms, social media and SEO, SEO applications in various industries, SEO in media web sites, etc. Through invited and open call submissions, a total of five excellent articles have been accepted, following a rigorous review process that required a minimum of three reviews and at least one revision round for each paper.

Keywords: selection, search engine indexing, on-page optimization, and off-page optimization

Search engine optimization (SEO)

Literature review

The first paper, written by Christos Ziakis, Maro Vlachopoulou, The

odosios Kyrkoudis, and Makrina Karagkiozidou [1], identifies the main factors that affect the ranking of a website in the search engines' results in order to provide enterprises and freelancers with a guide on the best

techniques to maximize a website's position in search results. The paper consists of two parts. The first part performs a literature review through a collection and analysis of academic paper and the

second part consists of research that was conducted manually using different phrases as case stud ies.

The second paper, written by MinosAthanasios Karyotakis, Evangelos Lamprou, Matina Kiou rexidou, and Nikos Antonopoulos that aims to expand the current literature about the SEO practices by focusing on examining, via the walkthrough method, the ways that news companies allow the users to comment on their online news articles. The study investigates an extensive sample of Greek, Cypriot, and international news websites.

The third paper written by Cristòfol Rovira, Lluís Codina, Frederic GuerreroSolé, and Carlos Lo pezosa [3] investigates academic SEO by analyzing and comparing the relevance ranking algorithms employed by various academic platforms in order to identify the importance of citati ons received in their algorithms. The authors analyze two search

engines and two bibliographic databases: Google Scholar and Microsoft Academic, on the one hand, and Web of Science and Scopus, on the other.

The fourth paper written by Andreas Giannakoulopoulos, Nikos

Konstantinou, Dimitris Koutsompolis, Minas Pergantis, and Iraklis Varlamis have contributed the

paper of the special issue. The purpose of this paper is to study the extent to which a university's academic excellence is related to the quality of its web presence. The study deals with the websit e quality and search engine optimization (SEO) performance of the most well-

known university websites, using the Academic Ranking of World Universities (ARWU) Shangh ai list as a base of reference.

The fifth paper was written by Dimitrios Giomelakis, Christina Karypidou, and Andreas Veglis includes an exploratory study on the use of search engine optimization (SEO) in news websites.

Through a series of semi-

structured interviews with SEO and media professionals at four Greek media organizations, the study examines the familiarity of these news publishers with SEO practices, including common trends and practices inside their own newsrooms, and the perceived impact of SEO on journalis m and news content.

To make it a bit easy and convenient for the businesses search engine optimization came into place. SEO helps in displaying one's website first than others. It gradually helps in increasing the traffic to their website. Using keywords properly will help in increase of traffic and popularity to the website. SEO is needed for the development of a brand's website and online reputation.

This article is a study of the need of Search Engine optimization in today's business world.SEO helps in improving website's position in search engine. SEO can be one of the most powerful weapon of a business In order to have its digital presence. It helps businesses to grow and innovate the existing channels.SEO is important as there are many ways to manipulate the search results. When websites try to manipulate it is low quality content, SEO comes into place. It ensures that such kind of manipulation is reduced up to a certain extent. It ensures a fair play. SEO is also cost-effective. Competitive industries tend to spend large amounts of money on paid website traffic. But small business who have a tight budget, SEO is a great way to drive qualified traffic to your site without directly paying for

Which businesses need SEO?

All kind of businesses irrespective of their capital, turnover or profits can use SEO. In fact, it is the best way to invest for visibility. If your SEO is constant, it will help your business to grow and succeed. SEO is not a one-time activity it is a continuous process. An SEO campaign can be changed or improved everyonce in a while to make sure that it keeps up with the changing algorithms of search engines.

Today, search engines play one of the most important roles in disseminating content. Search engine optimization (SEO) is a collection of strategies that improves a website's presence and visibility on a search engine's results page (SERP). In other words, the higher and more freq uently a site appears in search results, the more visitors it will receive through the use of search e ngines. The importance of SEO can be understood by the fact that many web sites today receive t he majority of their web traffic through a search engine's organic results. The methods that SEO includes can be divided into four major categories: keyword ;research/selection, se arch engine indexing, on-page optimization, and off

page optimization. Onpage optimization includes the management of all factors associated directly with someone's website, While off page optimization includes all the efforts made away from the website such as link building or social signal strategy. Undeniably, the world of search engine optimization has changed and evolved drastically over the years with a shift away from tr aditional ranking factors towards deeper analysis, and factors such as quality, multiform content, and social signals. However, even though SEO has changed a lot, it remains an important part of any digital marketing strategy. This special issue is soliciting theoretical and case studies contri

butions, discussing and treating challenges, state-of-the-

art technology, and solutions on search engine optimization, including, but not limited to, the fol lowing themes related to SEO: Theory of SEO, different types of SEO, SEO criteria evaluation, search engines' algorithms, social media and SEO, SEO applications in various industries, SEO in media web sites, etc.
